

# MRA PROJECT - MILESTONE 1

## CONTENTS:

- Project Description/Agenda
- Problem Statement
- Data Dictionary
- About Data
- Univariate Analysis
- Bivariate Analysis
- Multivariate Analysis

A decorative graphic on the left side of the slide consisting of white and light blue lines and circles, resembling a circuit board or a stylized tree structure.

## PROJECT DESCRIPTION

This project aims to find the underlying buying patterns of the customers of an automobile part manufacturer based on the past 3 years of the company's transaction data and hence recommend customized marketing strategies for different segments of customers.

# PROBLEM STATEMENT

An automobile parts manufacturing company has collected data of transactions for 3 years. They do not have any in-house data science team, thus they have hired you as their consultant. Your job is to use your magical data science skills to provide them with suitable insights about their data and their customers.

# DATA DICTIONARY

- ORDERNUMBER : Order Number
- CUSTOMERNAME :customer
- QUANTITYORDERED :Quantity ordered
- PHONE :Phone of the customer
- PRICEEACH :Price of Each item
- ADDRESSLINE1 :Address of customer
- ORDERLINENUMBER :order line
- CITY :City of customer
- SALES :Sales amount
- POSTALCODE :Postal Code of customer
- ORDERDATE :Order Date
- COUNTRY :Country customer
- DAYS\_SINCE\_LASTORDER :Days\_ Since\_Lastorder
- CONTACTLASTNAME :Contact person customer
- STATUS :Status of order like Shipped or not
- CONTACTFIRSTNAME :Contact person customer
- PRODUCTLINE :Product line – CATEGORY
- DEALSIZE :Size of the deal based on Quantity and Item Price
- MSRP :Manufacturer's Suggested Retail Price
- PRODUCTCODE :Code of Product

# ABOUT DATA

- Info: Data consists of total 2747 entries, with zero null values.
- Shape: Data has 2747 Rows and 20 Columns.
- Data Types: It has 1 column of 'datetime64[ns]' data type, 2 columns of 'float64', 5 columns of 'int64' and 12 columns of 'object' data type.

```
RangeIndex: 2747 entries, 0 to 2746
Data columns (total 20 columns):
#   Column                Non-Null Count  Dtype

max	10425.000000	97.000000	252.870000	18.000000	14082.800000	3562.000000	214.000000

- Assumptions: At first glance over the summary of the data, it seems like the items are not too costly, the average price of each item is 101.09. The difference between the max and min ordered quantity is too high, and the standard deviation(9.76) is very less, it means there are very few customers who ordered higher quantities than others. Also, the average of MSRP is coming out to be 100.69, that isn't very high. We need to focus here on few things mainly like 'Sales' and 'Days since last order'.

# UNIVARIATE, BIVARIATE AND MULTIVARIATE ANALYSIS

1) COUNTRY: Let's first look at the count plot for the COUNTRY.

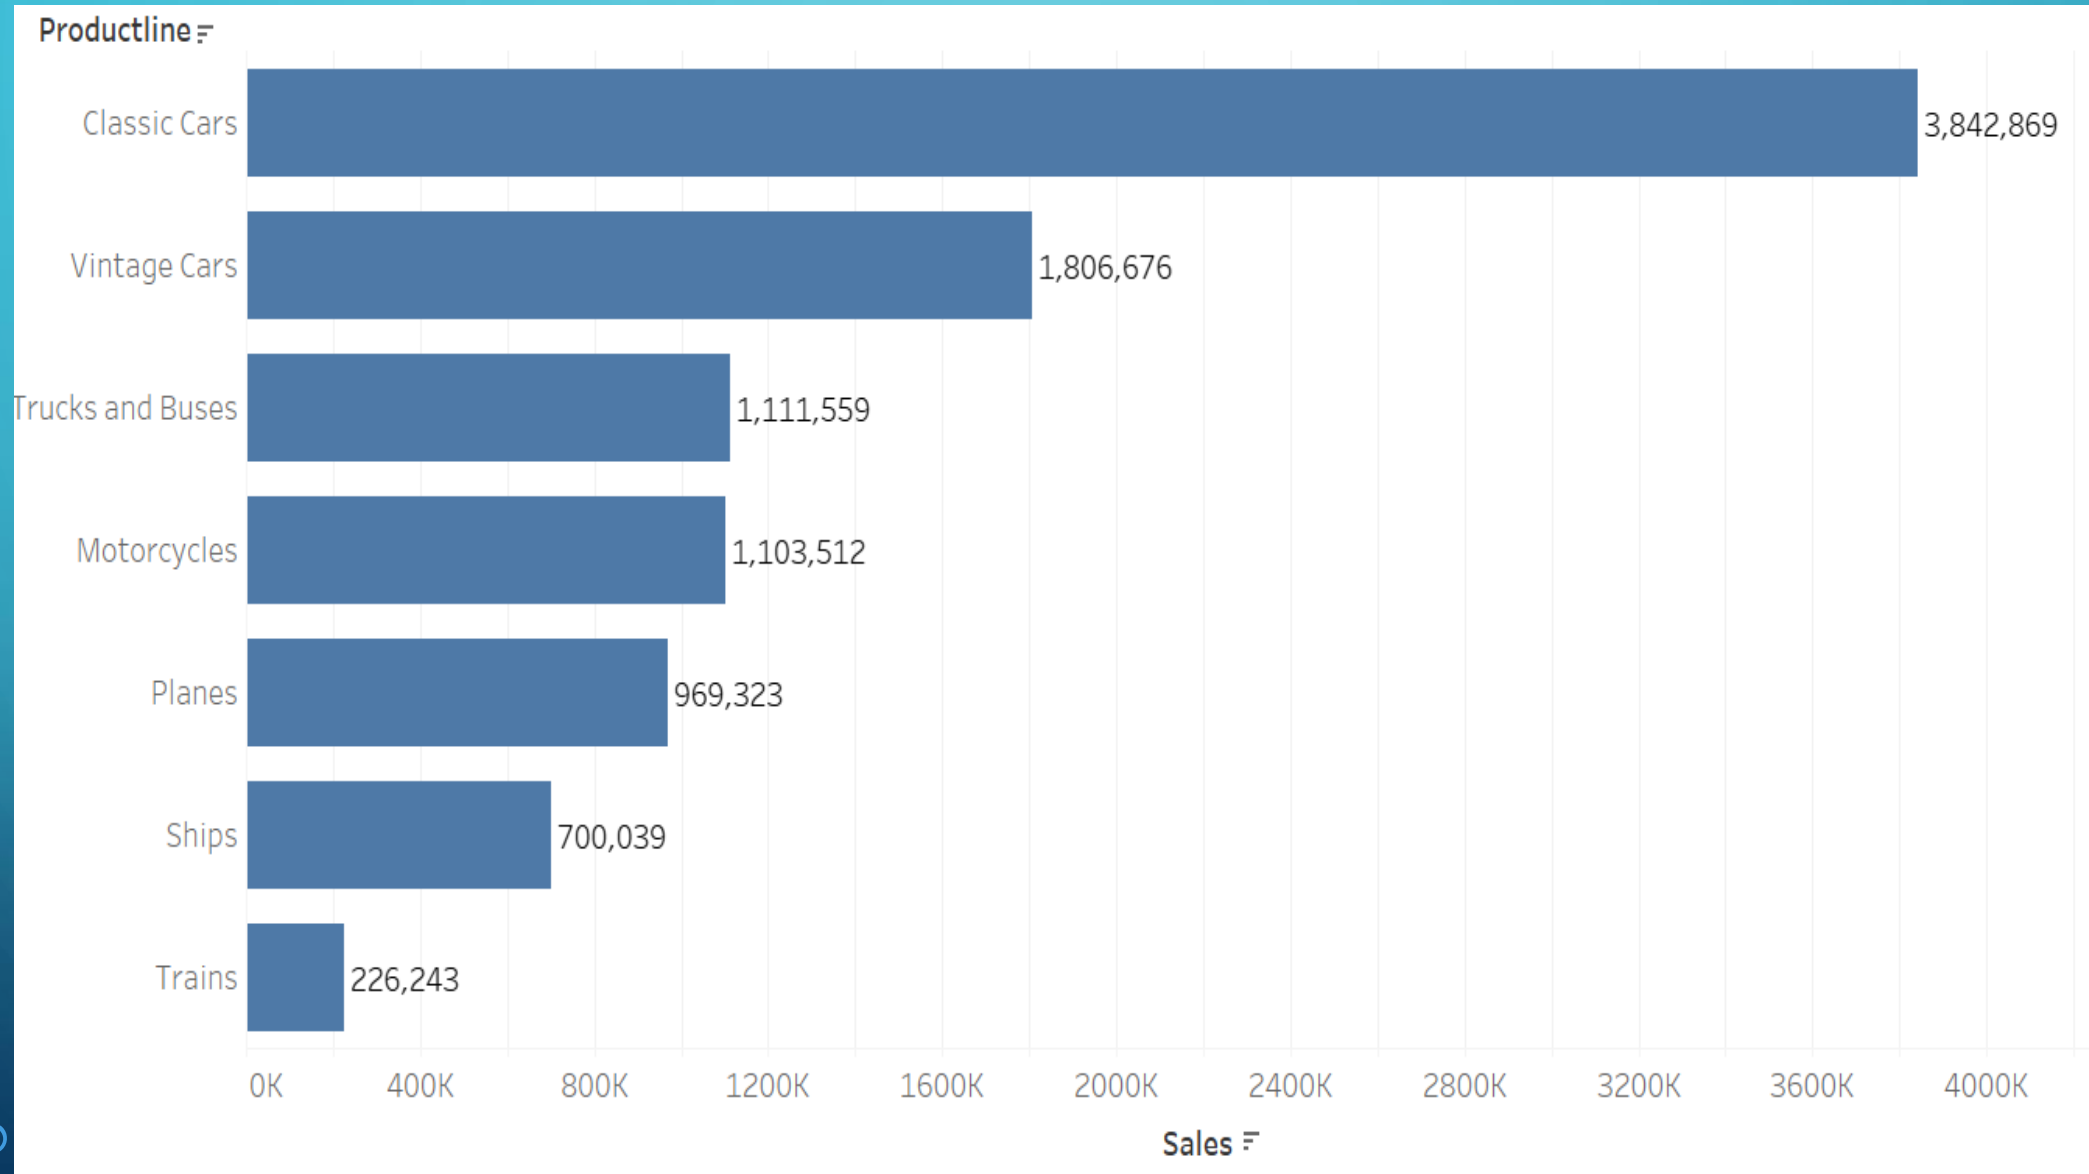

- Out of total 19 countries in the dataset, It seems like USA clearly wins the game here. The maximum number of sales is coming from USA and the minimum number of sales are here from Ireland.

2) CITY: Here we can see that the city 'Madrid' has max no. of sales.

3) PRODUCT LINE- We can clearly see that Classic Cars has the max no. of sales, (above 4000) followed by Vintage Cars. While Trains has the least no. of sales.
